Health Lecture

Health Checks

Center for Advanced Research and Education

The Center for Advanced Research and Education has been enhancing the lecture plan in the Clinical Researcher Registry System by newly offering Avoiding Academic Dishonesty as well as Ethical Guidelines as mandatory lectures. On Intellectual Property is an optional lecture that reinforces ethical education in clinical research, and education for validating data obtained in research activities. The Center also revised the procedure to invite applicants for the grant-in-aid for creative life science research supported by the President's discretionary expenses to stimulate research activities within the university and promote basic research and university-supported projects. Furthermore, the Center strongly supports the Hokkaido base for the Translational Research Network Project and patent applications.

The Department of Technology Support (composed of the Central Laboratory for Research and Education, the Animal Laboratory for Medical Research, and the Laboratory for Radioactive Isotope Research) in the Center for Advanced Research and Education supports research activities and contributes to society by participating in basic projects for creating innovation by the Japan Science and Technology Agency (such as Science Leaders' Camp (SLC) and Super Science Highschool (SSH)) and scientific events held by the Asahikawa Well-Being Consortium.
